SMARTFILES | FICTIONAL SAMPLE DOCUMENT

MEETING REPORT: CEDAR LAB PROJECT REVIEW

Date: 18 June 2026. Location: fictional Northbridge Campus, Room 204. Facilitator: Noor Patel.

Attendees: Noor Patel, Eli Brooks, Sora Kim, and Mateo Rivera. Agenda: sensor reliability, water-use dashboard, and the final demonstration.

Discussion: The group agreed that readings should be labeled with the sensor ID and calibration date. The dashboard must distinguish missing readings from low moisture.

Decisions: Keep the alert threshold at 28 percent for the next demo; display a clear note that it is a prototype setting, not universal gardening advice.

Actions: Eli will add missing-data checks by 22 June. Sora will review the chart legend. Mateo will prepare a two-minute explanation of the test method.

Sample meeting record; participants and decisions are fictional.
